

IBM TPF Internet Mail Server Services

IBM is pleased to announce the availability of the following services for the planning, implementation, and customization of the IBM TPF Internet Mail Server in an IBM TPF 4.1 environment.

Mail Server Implementation Planning

A TPF consultant may be engaged to provide guidance and direction in planning the implementation and migration to an IBM TPF Internet Mail Server environment. The topics of discussion related to such services may include:

- Mail Server orientation overview
- Mail Server configuration and systems definitions
- Impact on the current mail environment and migration considerations
- Identification of desired customized enhancements
- Operational and training considerations
- Project plan and timeline

Mail Server Implementation

A TPF consultant may be engaged to provide services related to IBM TPF Internet Mail Server set up and checkout. These services may include:

- TPF Internet Mail Server set up/definition
- Validation of basic functions
- Development and validation of customized enhancements
- Mail Server education for operators and users
- Mail Server education for administrators

The duration of the services specified above is dependent on the planned size and scope of the engagement and will be estimated during the **Mail Server Implementation Planning** Phase.

It is IBM's intent to work with Allied Management Systems (AMS) on selected engagements related to IBM's TPF Internet Mail Server services. AMS's resources have experience with the IBM TPF Internet Mail Server system and its components.
